EXPERIMENT INSPIRED BY

What in the Wow?! The Science of Awe

DISAPPEARING EGG SHELL

MATERIALS

- ★ A fresh, raw egg
- ★ A glass jar with a lid
- ★ White vinegar

EXPERIMENT
WOW TO:

This simple science experiment is sure to leave you in total awe as you dissolve the shell of an egg while the egg itself inside the shell remains fully intact.

- 1** Gently place the egg in the jar.
- 2** Fill the jar with vinegar, leaving about an inch of space at the top (leaving this space is very important).
- 3** Loosely close the lid (you'll want the gasses that build up inside the jar to be able to escape) and leave it to set for a couple of days.
- 4** Remove the egg from the jar, after 2 or 3 days, and gently rinse it off. The eggshell will be gone now and the egg will have a rubbery texture like a bouncy ball. You might even be able to gently bounce it, just be careful!
- 5** Experience awe over the shell-less egg!
